```
TITLE OF INVENTION: Proteases From Gram-Positive Organisms
FILE REFERENCE: GC394-PCT
CURRENT APPLICATION NUMBER: US/09/308,375
CURRENT FILING DATE: 1999-05-14
EARLIER APPLICATION NUMBER: EP9719636.4
EARLIER FILING DATE: 1997-09-15
NUMBER OF SEQ ID NOS: 3
SOFTWARE: PastSEQ for Windows Version 3.0
SEQ ID NO 2
LENGTH: 2285
TYPE: PAT
ORGANISM: Bacillius subtilis
US-09-308-375-2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                                                                                                                                                                                                                                                                                                                     Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Š

MHP3 antigen and its fragments are useful in manufacturing a vaccine for treating c preventing a disease or disorder in an animal, especially pig, caused by M. hyopneumoniae infection e.g. enzoctic mycoplasma pneumonia. The mhp3-encoded proteins may be used as immunogens to generate antibodies which immunospecifically bind such an immunogen. The antibodies generated against the antigen are useful in diagnostic immunoassays, passive immunotherapy and generation of anti-idiotypic antibodies. Mhp3 proteins may also be used in immunoassays, e.g. to detect or measure in a biological sample from a vaccinated or potentially infected test animal the presence of antibodies to the antigen, and thus to monitor the immune response and/or to diagnose
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WPI;

                                                                                                                                                                                                                            The sequence represents Mycoplasma hyopneumoniae a recombinant MHP3 antigen lacking the first 28 amino acids (the putative signal sequence). MHP3 antigen and its fragments are useful in manufacturing a vaccine for treating or preventing a disease or disorder in an animal, especially pig, caused by M. hyopneumoniae infection e.g. enzootic mycoplasma pneumonia. The mhp3-encoded proteins may be used as immunogens to generate antibodies which immunospecifically bind such an immunogen. The antibodies generated against the antigen are useful in diagnostic immunoassays, passive immunotherapy and generation of anti-idiotypic antibodies. Mhp3 proteins may also be used in immunoassays, e.g. to detect or measure in a biological sample from a vaccinated or potentially infected test animal the presence of antibodies to the antigen, and thus to monitor the immune response and/or to diagnose

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         for tumour immunotherapy and for producing and purifying antibodic which can be used for tumour diagnosis, localisation and therapy. The antibodies can also be used for the production of anti-idiotypic antibodies which can also be used in immunotherapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Regression associated antigens (RAA's) are identified in material from neoplastic cells by their immunolyical reactivity with regression associated antibodies from the serum of patients diagnosed as undergoing regression of a tumour. RAA's can be used.

                                                                                                                   This sequence is a membrane protein designated M161Ag. Oligonucleotide probes for the cDNA were designed from putative N-terminal M161Ag peptide sequences isolated from P93 cells. M161Ag can be used in the development of a leukaemia treating agent.

Can be useful in vaccines for inducing the Streptococcus pneumoniae protein Streptococcus pneumoniae, for treatment or prevention of infection e.g. pneumonia, otitis media or meningitis. Probes based on the nucleic acid are used to detect Streptococcus infection (by usual phyridisation or amplification methods), also for isolating Streptococcus genes or their alielic variants. The protein can be used similarly to detect specific antibodies in standard immunoassays, especially for diagnosing or monitoring infections. Antibodies which bind the protein are used to detect corresponding antigens, to purify the protein and for passive immunisation (optionally coupled to a toxin). Vaccines are administered, e.g. by injection, orally or through the skin, typically at 0.01-1000 (especially 10-300) mu g/ml per dose.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      genes, proteins and antigenic polypeptides isolated from E. faecalis. The proteins can be used in vaccines for preventing or attenuating an infection caused by a member of the Enterococcus genus in an animal. They can also be used for detecting Enterococcus antibodies in a sample. The unclectide sequences can be used for detecting Enterococcus nucleic acids. Products from the present invention can also be used for secreening compounds to identify agonists and antagonists of E. faecalis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated Enterococcus faecalis polynucleotides - used products for the detection of Enterococcus and for use in for prevention or attenuation of Enterococcus infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence represents an antigenic polypeptide fragment isolated from Enterococcus faecalis. The present invention describes genes, proteins and antigenic polypeptides isolated from E. faecalis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 9;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WPI; 1999-070095/06
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    04-MAY-1998;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            12-NOV-1998.

                                                                                                                                                                                                                                                                                                                                                   The present sequence represents a protein isolated from Enterococcus faecalis. The present invention describes genes, proteins and antigenic polypeptides isolated from E. faecalis. The proteins can be used in vaccines for preventing or attenuating an infection caused by a member of the Enterococcus genus in an animal. They can also be used for detecting Enterococcus antibodies in a sample. The nucleotide sequences can be used for detecting Enterococcus nucleic acids. Products from the present invention can also be used for screening
                                                                                                                                                                                                                                                                                                     Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated Enterococcus faecalis polynucleotides - used products for the detection of Enterococcus and for use in for prevention or attenuation of Enterococcus infection

                       The invention relates to a novel secreted autostimulatory factor, interleukin-X (II-X), from an Epstein Barr virus (EBV)-carrying lymphoblastoid cell line. IL-X proteins can be used to enhance the growth of cells in vitro, or to grow primary human B cell cultures to facilitate
                                                                                                                                                                                                  New IL-x polypeptides useful e.g. for enhancing the growth of cells vitro, for growing primary human B cell cultures to facilitate proliferation of these cell lines, as therapeutics or prophylactics, molecular weight standards

Nucleotide sequences encoding the peptides could be used to produce recombinant peptides or they could be used as probes or primers for diagnostic and/or analytical polymerase chain reaction (PCR) procedures, or as proor RNA sizing standards. The present sequence represents the amino ac sequence of IL-X.

```

The sequences given in AAR31013 and AAR33280 represent the burgdorferi proteins P39-alpha and P39-beta. The DNA encoc proteins was isolated by polymerase chain reaction (PCR) us

(PCR) using encoding

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     õ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                3888888888888888888888
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                primer sequences given in AAQ34673-76. This DNA contained two open Creading frames (ORF). It was therefore concluded that the p39 antigen Which has been previously described is not one protein but two, 39-alpha Cand 39-beta. The p39 signal appears to be enhanced when both genes Carculated molecular weight of 36.926 kD. The protein with a Calculated molecular weight of 36.926 kD. The protein encoded by this Calculated molecular weight of 36.926 kD. The protein encoded by this Canculated molecular weight of 39.926 kD. The protein encoded by this Canculated protein send of 93.936 kD. The protein encoded by this Canculated protein send of 93.936 kD. The protein encoded by this Canculated Pass been designated p39-beta. This genes' ORF starts 116 cultivations of 93.94 pha and encodes a protein of 341 amino Cacids (37.506 kD). The promoter located 5' of p39-slpha appears to be present with classic -10 and -35 regions whereas p39-beta lacks a crecognisable promoter sequence. Both genes have putative ribosomal binding sites immediatly 5' to the start codons and each is terminated thinding sites immediatly 5' to the start codons and each is terminated that these genes have 628 similarity.

cc primer sequences given in AAQ34673-76. This DNA contained two open creading frames (ORF). It was therefore concluded that the P39 antigen which has been previously described is not one protein but two, 39-alpha cand 39-beta. The P39 signal appears to be enhanced when both genes calculated molecular weight of 36.926 kD. The protein with a calculated molecular weight of 36.926 kD. The protein encoded by this calculated molecular weight of 36.926 kD. The protein encoded by this calculated in the serum from human Lyme patients. The ORF conclectides downstream of p39-beta. This genes' ORF starts 116 conclectides downstream of p39-alpha and encodes a protein of 341 amino calculated in the promoter located 5' of p39-alpha appears to be present with classic -10 and -35 regions whereas p39-beta lacks a crecognisable promoter sequence. Both genes have putative ribosomal control of the promoter sequence. Both genes have putative ribosomal control of the patent of the genes shave 628 similarity.

CC (Note: Revised entry submitted to correct the patent number format of CC us Government-owned NTIS applications to prevent classes with ongoing US granted patent numbers. For further information please visit the Derwent com/dwpi/updates/ntis_us.html.)
